

Clean Air Car Care Tips

JULY 2003

The California Department of Consumer Affairs/Bureau of Automotive Repair (DCA/BAR) recommends that you refer to your vehicle's owner's manual for information on how often to service your car. We hope you'll also consider the following tips that will help save gas, keep California's air clean and help your car pass its Smog Check:

1. Change engine oil and air, oil and fuel filters at manufacturer's suggested intervals.
2. Perform all other service and maintenance at manufacturer's suggested intervals.
3. Check tire pressure frequently.
4. Check tire condition for abnormal wear patterns.
5. Inspect hoses, wiring and belts regularly.
6. Service engine promptly when warning lights appear.
7. Do not modify your vehicle's emission control system.

*Clean air is
everyone's
job!*

Consider a Pre-Inspection Test

If you're not sure whether your vehicle will pass its Smog Check, you can ask a licensed Smog Check technician for information about a pre-inspection test. A pre-inspection helps diagnose any potential emissions-related problems, giving you a chance to make necessary repairs before your vehicle undergoes an official Smog Check inspection.
